

ECHO

AGENTIC OPERATING SYSTEM

From boardroom strategy to clinic operations. One platform.

THE PROBLEM

Nobody validated what's underneath.

78% of enterprise strategies fail in execution

McKinsey, "Why Transformations Fail"

STRATEGY DECK

4 months

to build a strategy

127 meetings

to align stakeholders

1 deck

that nobody validated

And then you hit the wall.

THE PATTERN

The traditional approach discovers problems last.

INTRODUCING ECHO

An Agentic Operating System.

ECHO is not a tool, a consultancy, or a platform you log into. It’s an AI-native operating system that discovers what your organization actually needs — then builds and runs the solution. With your people.

01

Discover

AI agents interview hundreds of stakeholders in weeks. They map your real landscape — **not the one in the strategy deck**. Every insight is attributed, scored, and cross-validated.

02

Build

Agents author solutions based on what they discovered. **Your people decide** what gets built — product owners, architects, designers stay in control at every step.

03

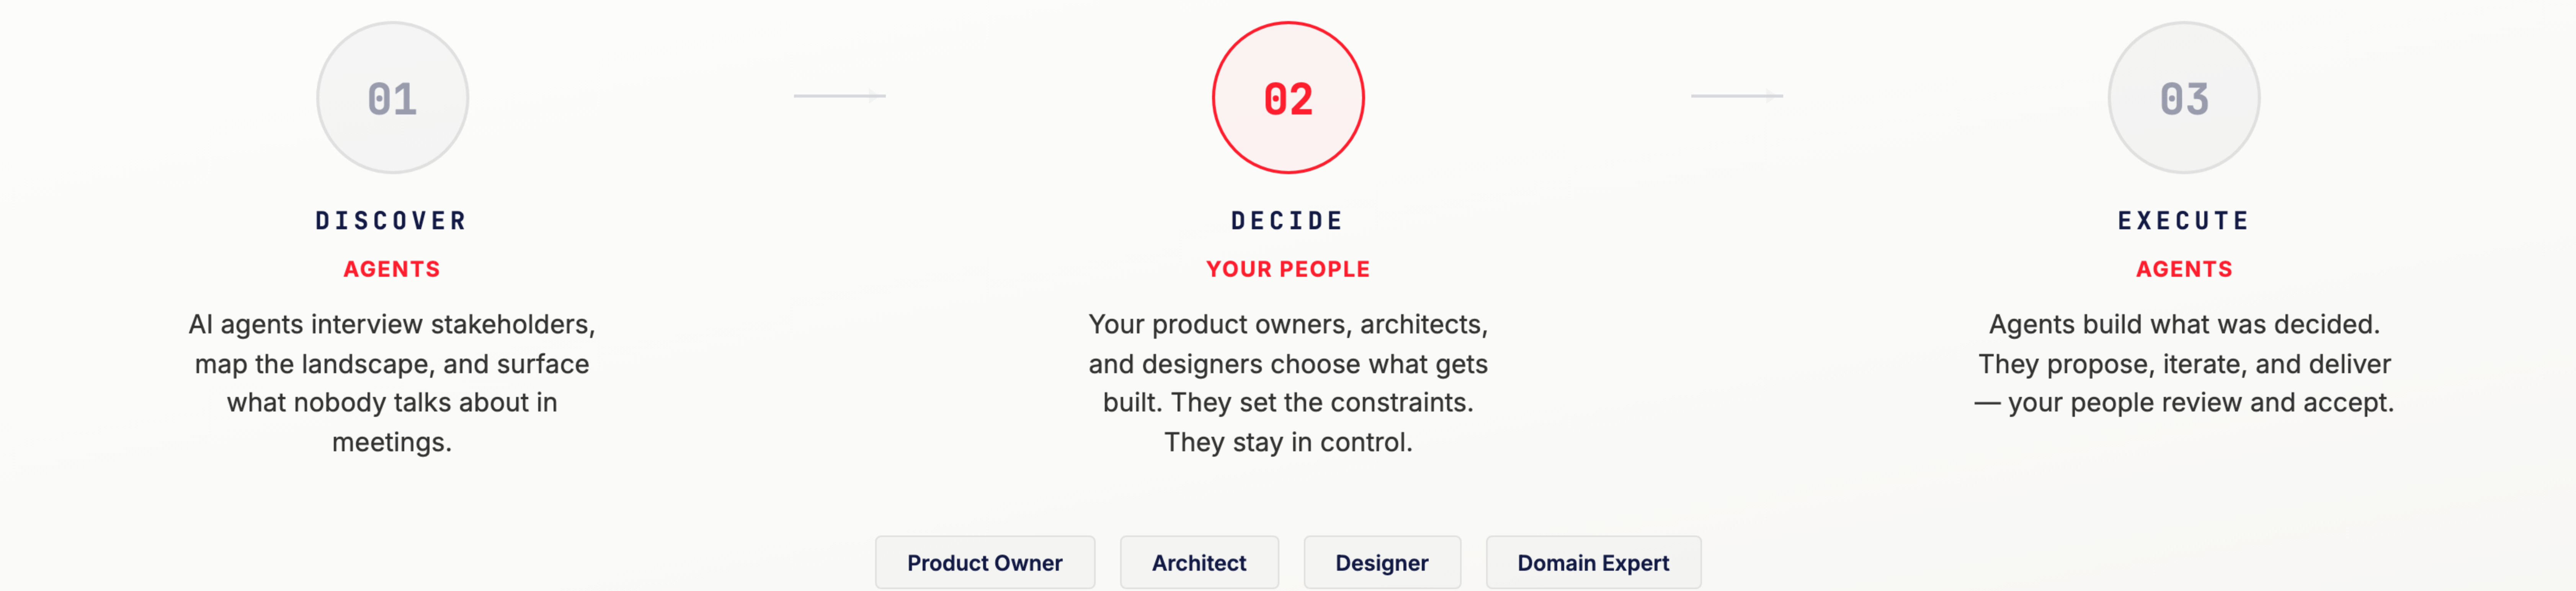

Operate

The same system that discovered and built can **run alongside your teams**. It operates alongside your clinicians, ambulance operators, alarm system sales personnel — in the frontline, with your people.

Discover → Build → Operate is a continuous loop. ECHO keeps learning from how your organization actually works.

HOW IT WORKS

Agents author. Humans decide. Repeat until done.

THE RULE **Agents never decide.** They discover, author, and execute. Humans own every decision that shapes what gets built and how it operates.

THE SHIFT

~~Synchronous. Sequential.~~
~~12 people in a room.~~

Asynchronous. Parallel.
300 stakeholders in weeks.

ECHO runs structured interviews across your entire organization — in weeks, not quarters.

Not surveys. Real conversations.

TIER 1

STRATEGIC

"Where is the organization, really?"

Confidence-scored discovery across 10 thematic areas. Cross-country heatmaps. Dissonance detection. Evidence-backed charter — not assumptions.

CIO · VPS · STEERING COMMITTEE

TIER 2

TACTICAL

"Where are the friction points?"

300 structured interviews in weeks. Cross-border process analysis. Friction maps showing where DK, NO and SE diverge — and where they don't know they diverge.

DIRECTORS · PROGRAM MANAGERS

TIER 3

OPERATIONAL

"How does it hit daily work?"

AI-triaged referral queues. Insurance rule validation. Psychologist matching. SLA tracking. ECHO doesn't just analyse — it operates alongside your clinicians.

CLINIC COORDINATORS · OPERATORS

Strategic Vision

Where is the Nordic healthcare platform going?

Organizational Culture

How do DK, NO, SE teams actually work?

Process Maturity

Which processes survived acquisition intact?

Technology Landscape

What's underneath? Which systems overlap?

Data & Integration

Can DK patient data reach NO operations?

Change Readiness

Who's ready to move? Who's dragging feet?

Stakeholder Alignment

Do the VPs agree on the same future?

Risk & Compliance

Bruttolønsordninger vary by country. What else?

Delivery Capability

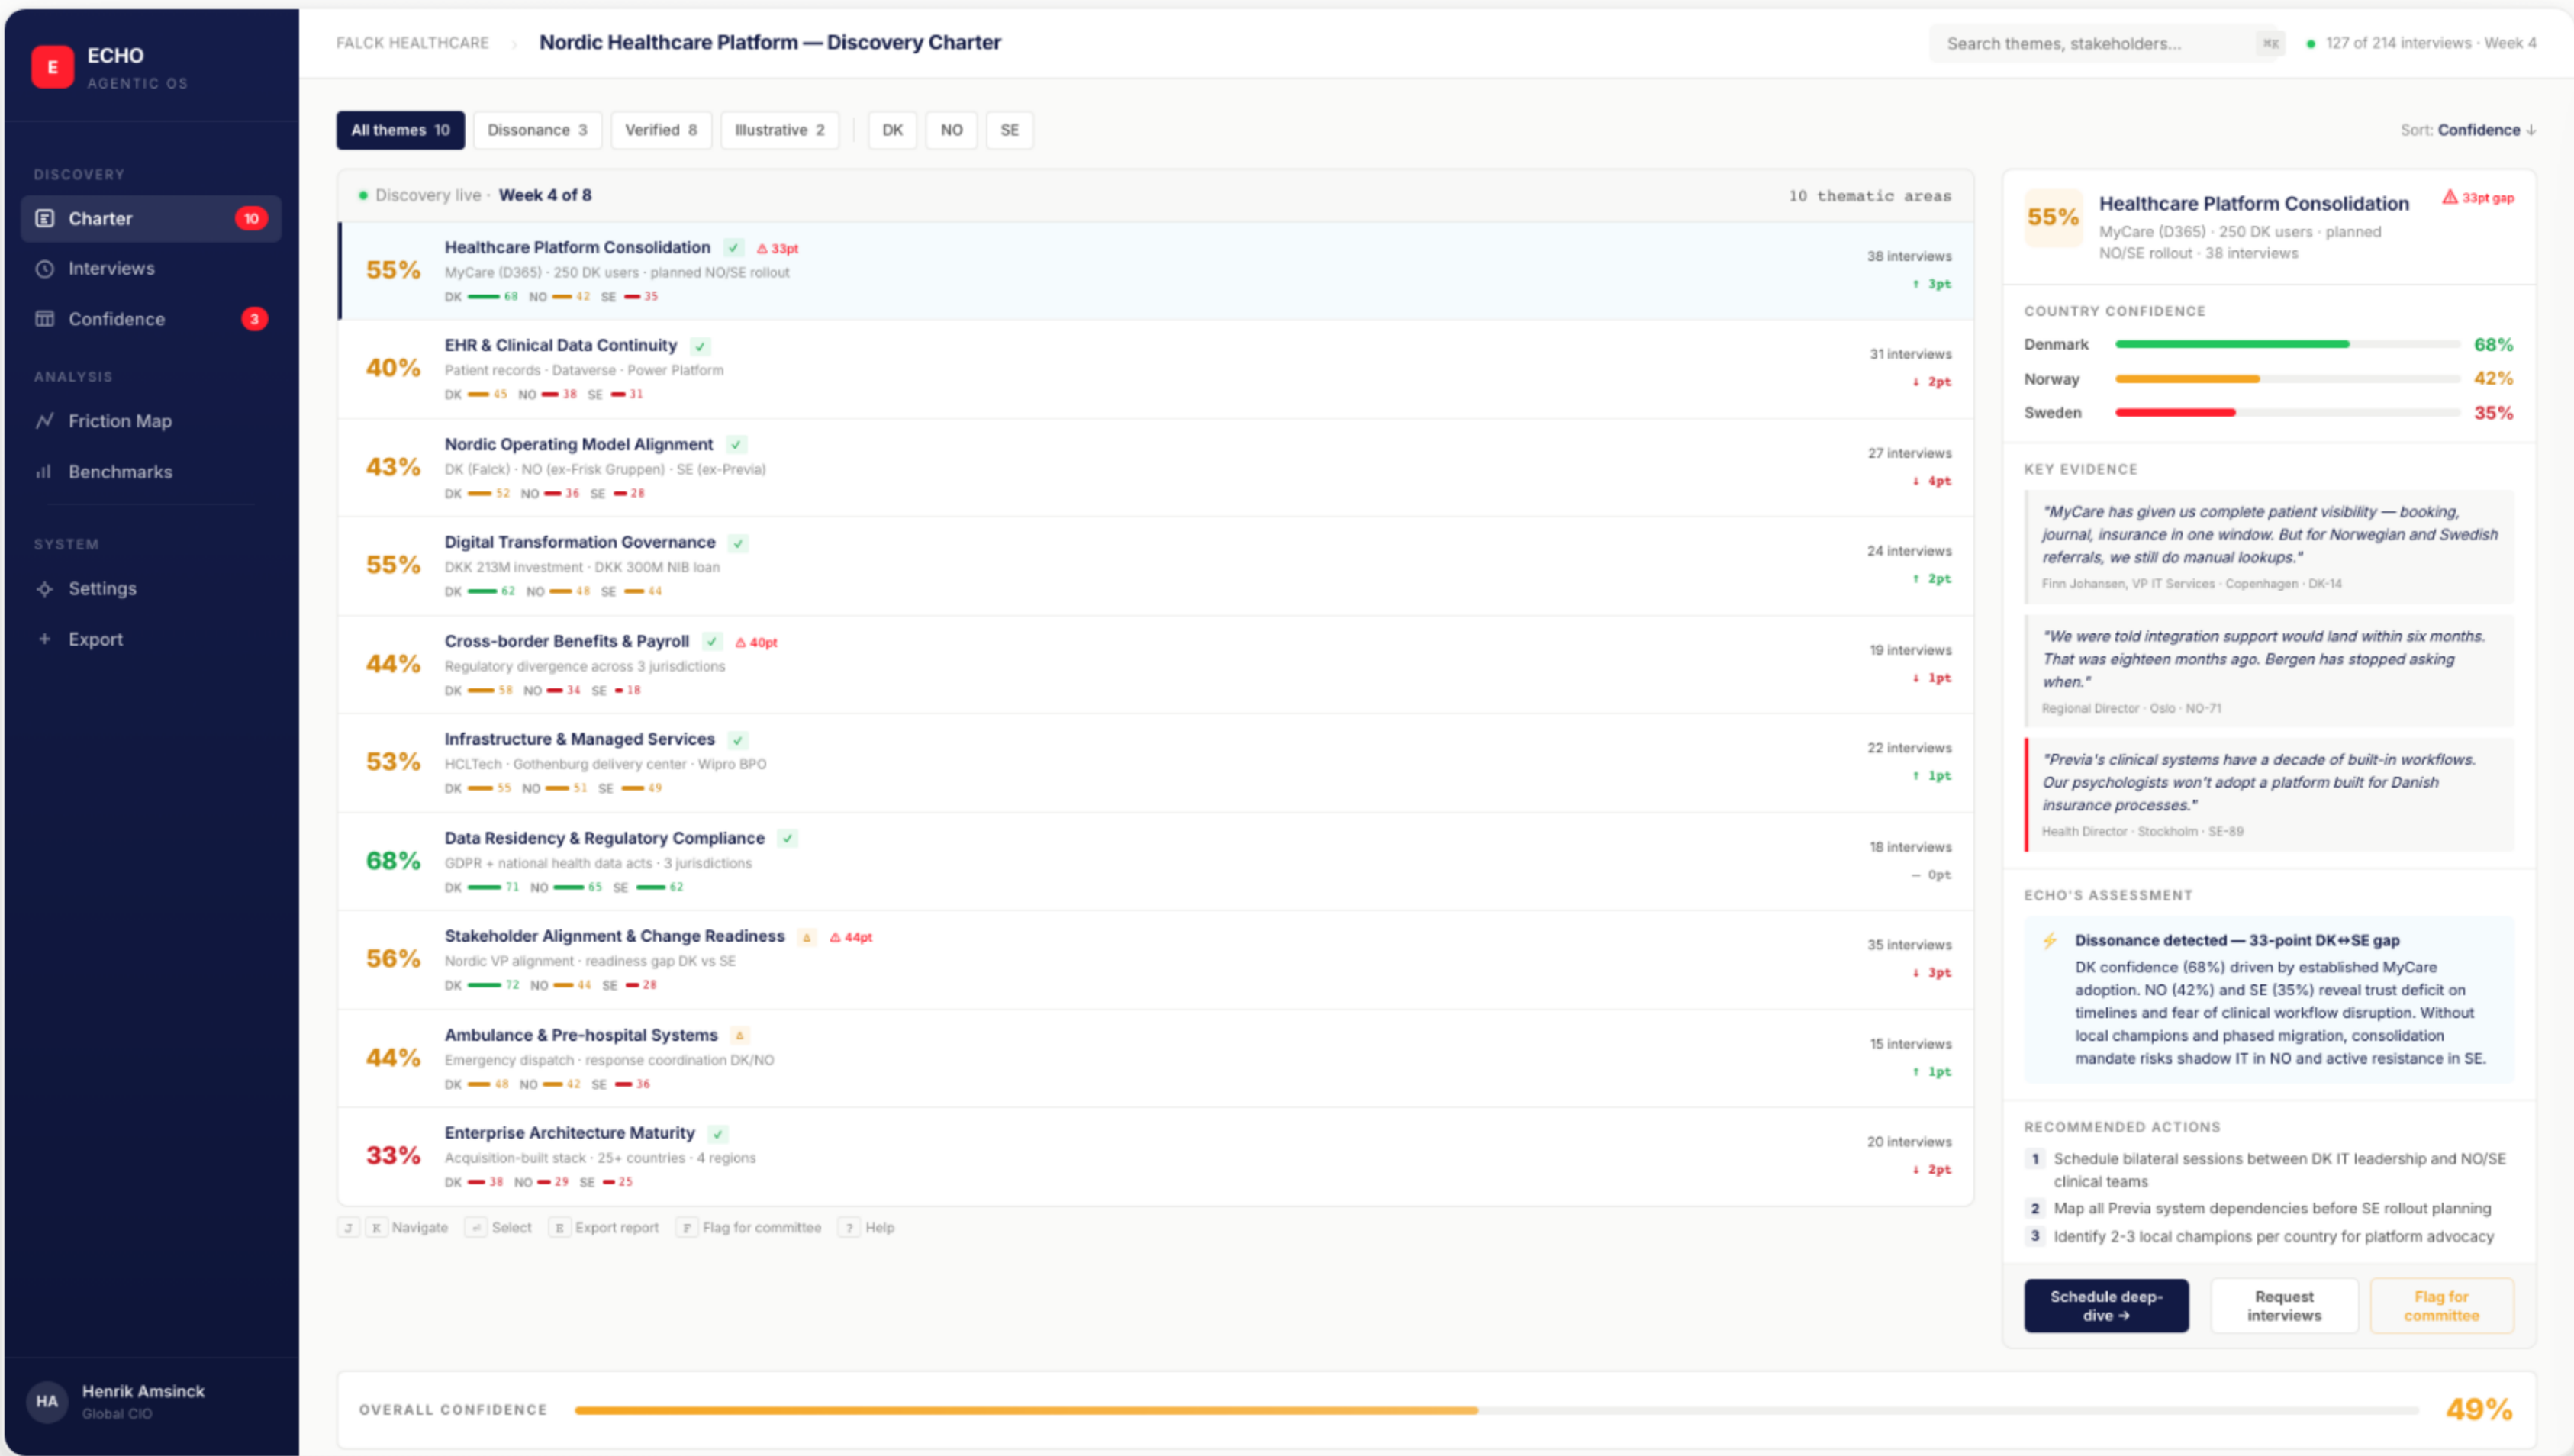

Can 14 divisions execute simultaneously?

Business Value Mapping

Which harmonization unlocks the most value?

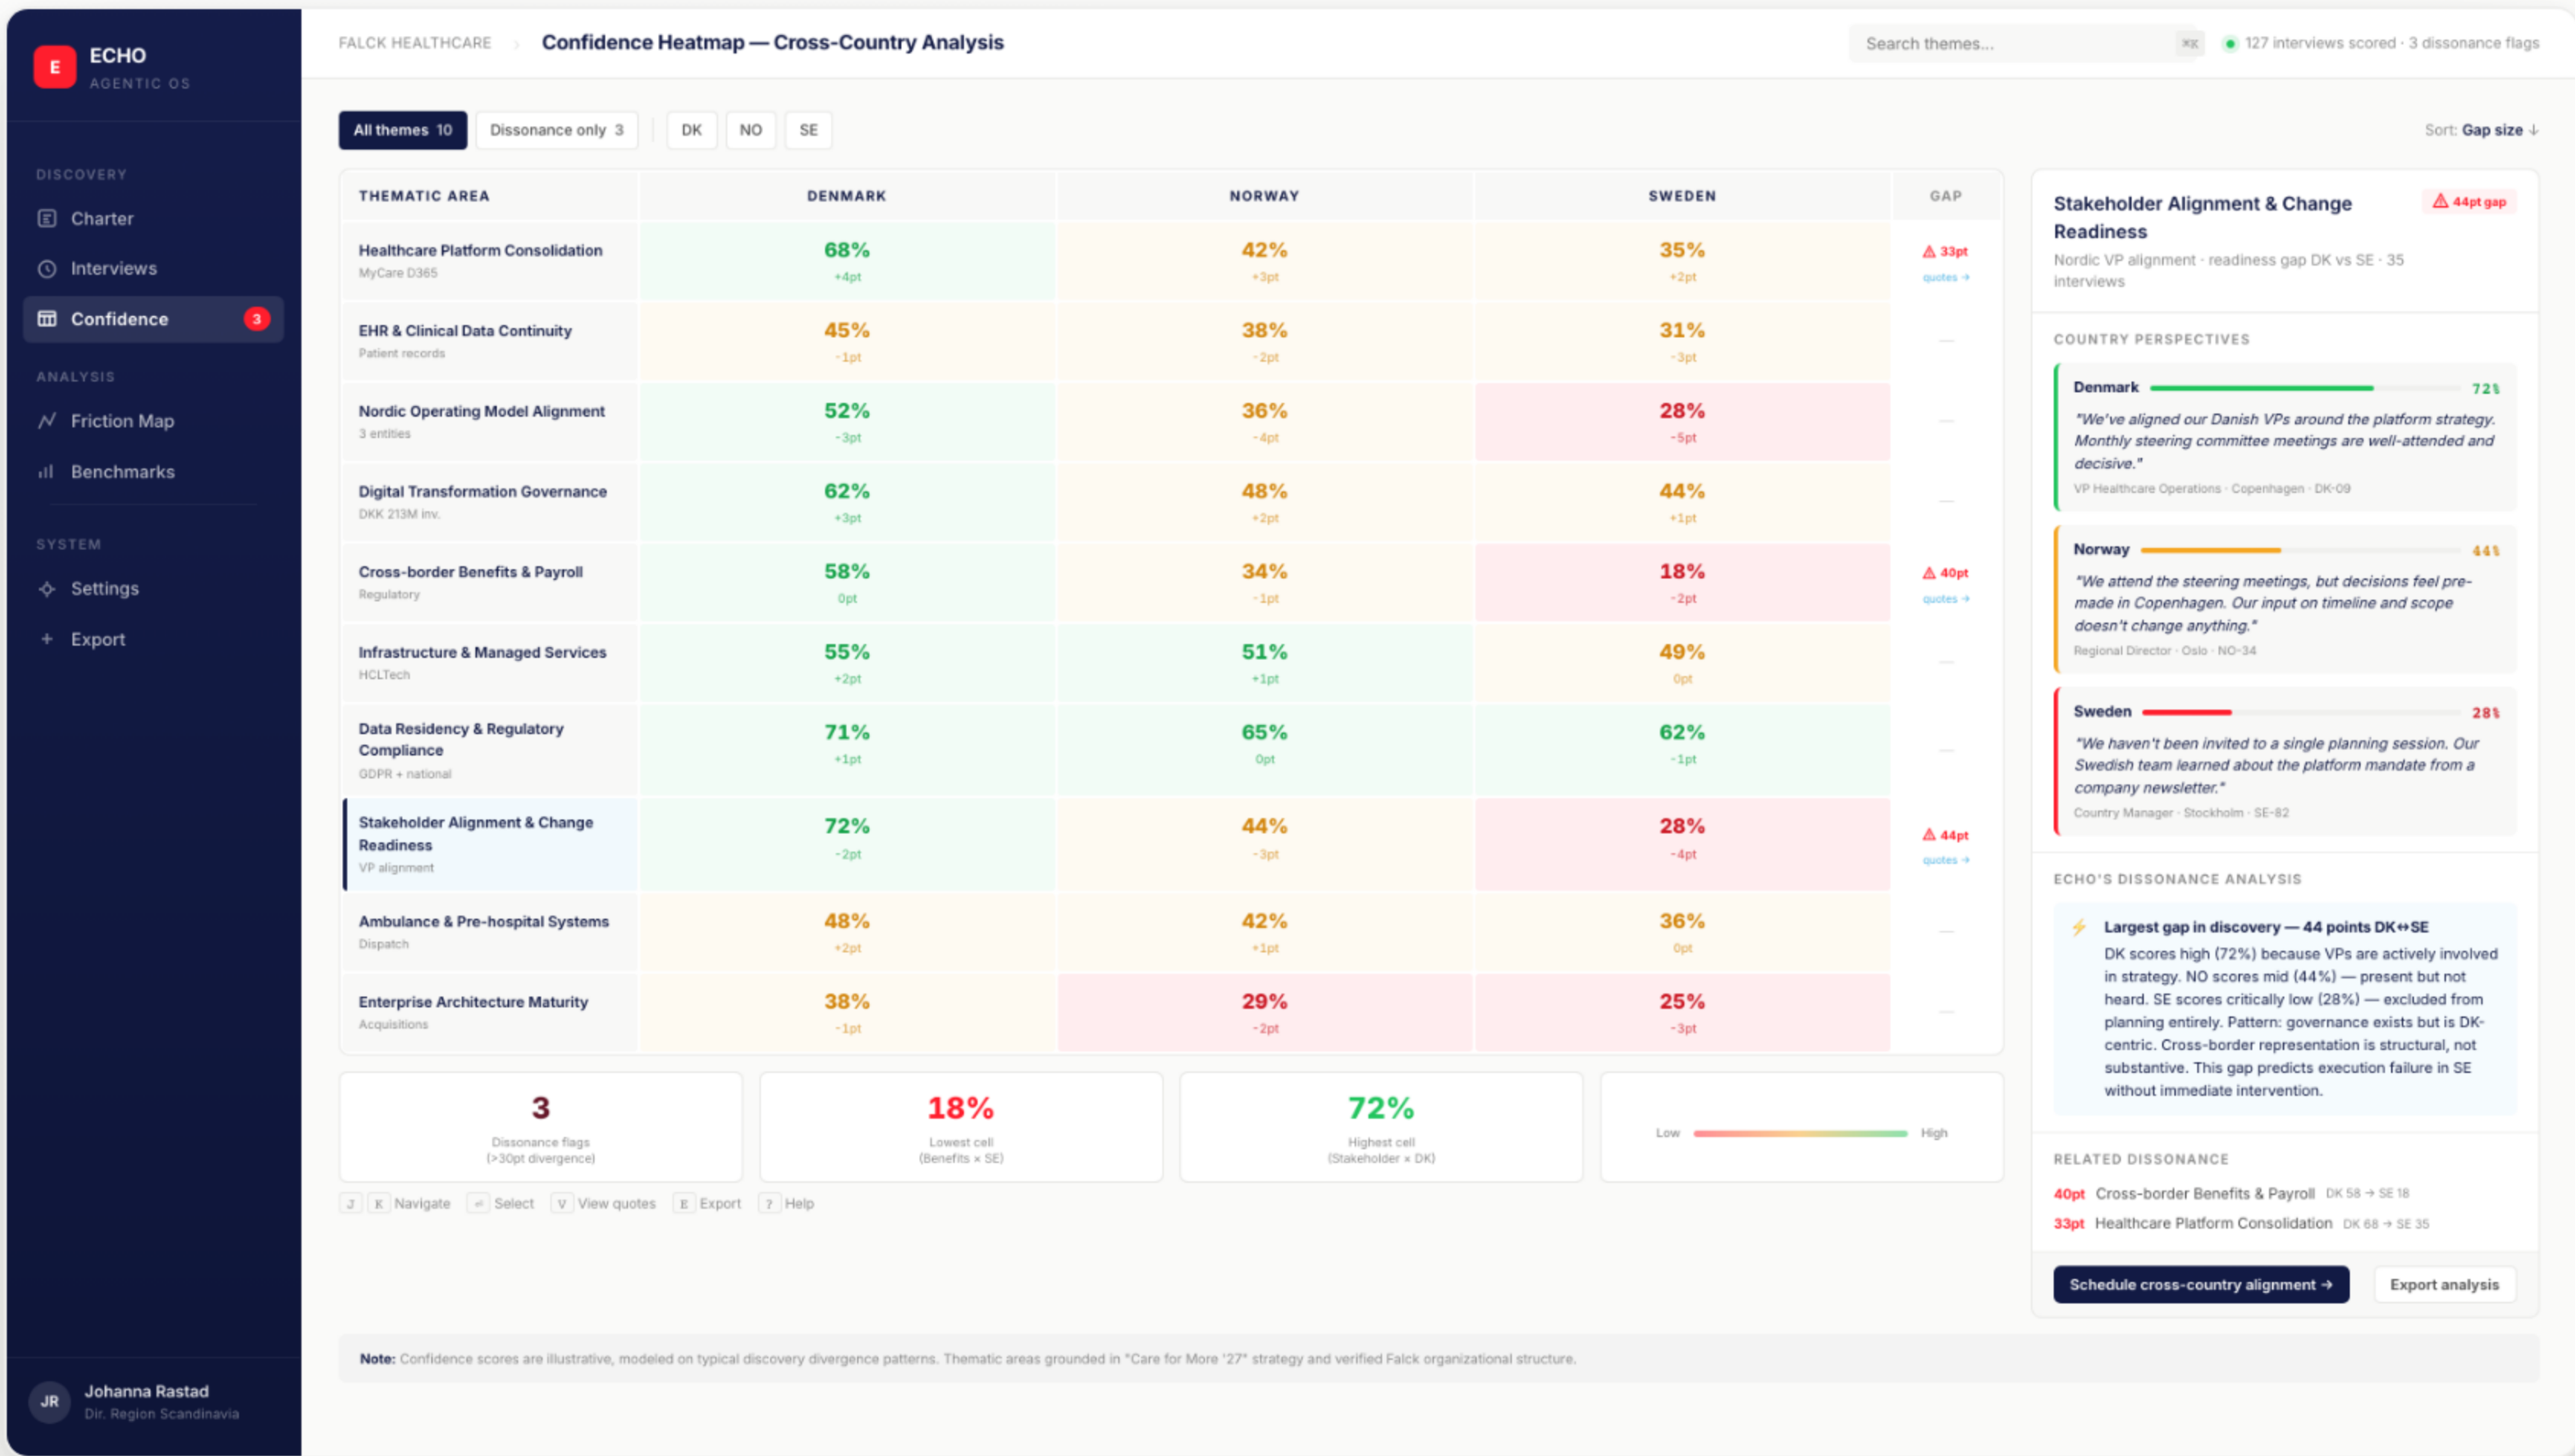

Strategic Intelligence

FOR — CTO • VPs • Steering Committee

100-Day Discovery Charter

- **Evidence-backed priorities** — every initiative traced to stakeholder interviews, not assumptions
- **Cross-country alignment** — DK, NO, SE priorities mapped side by side with dissonance flagged
- **Actionable from day 1** — a charter your steering committee can approve in one session

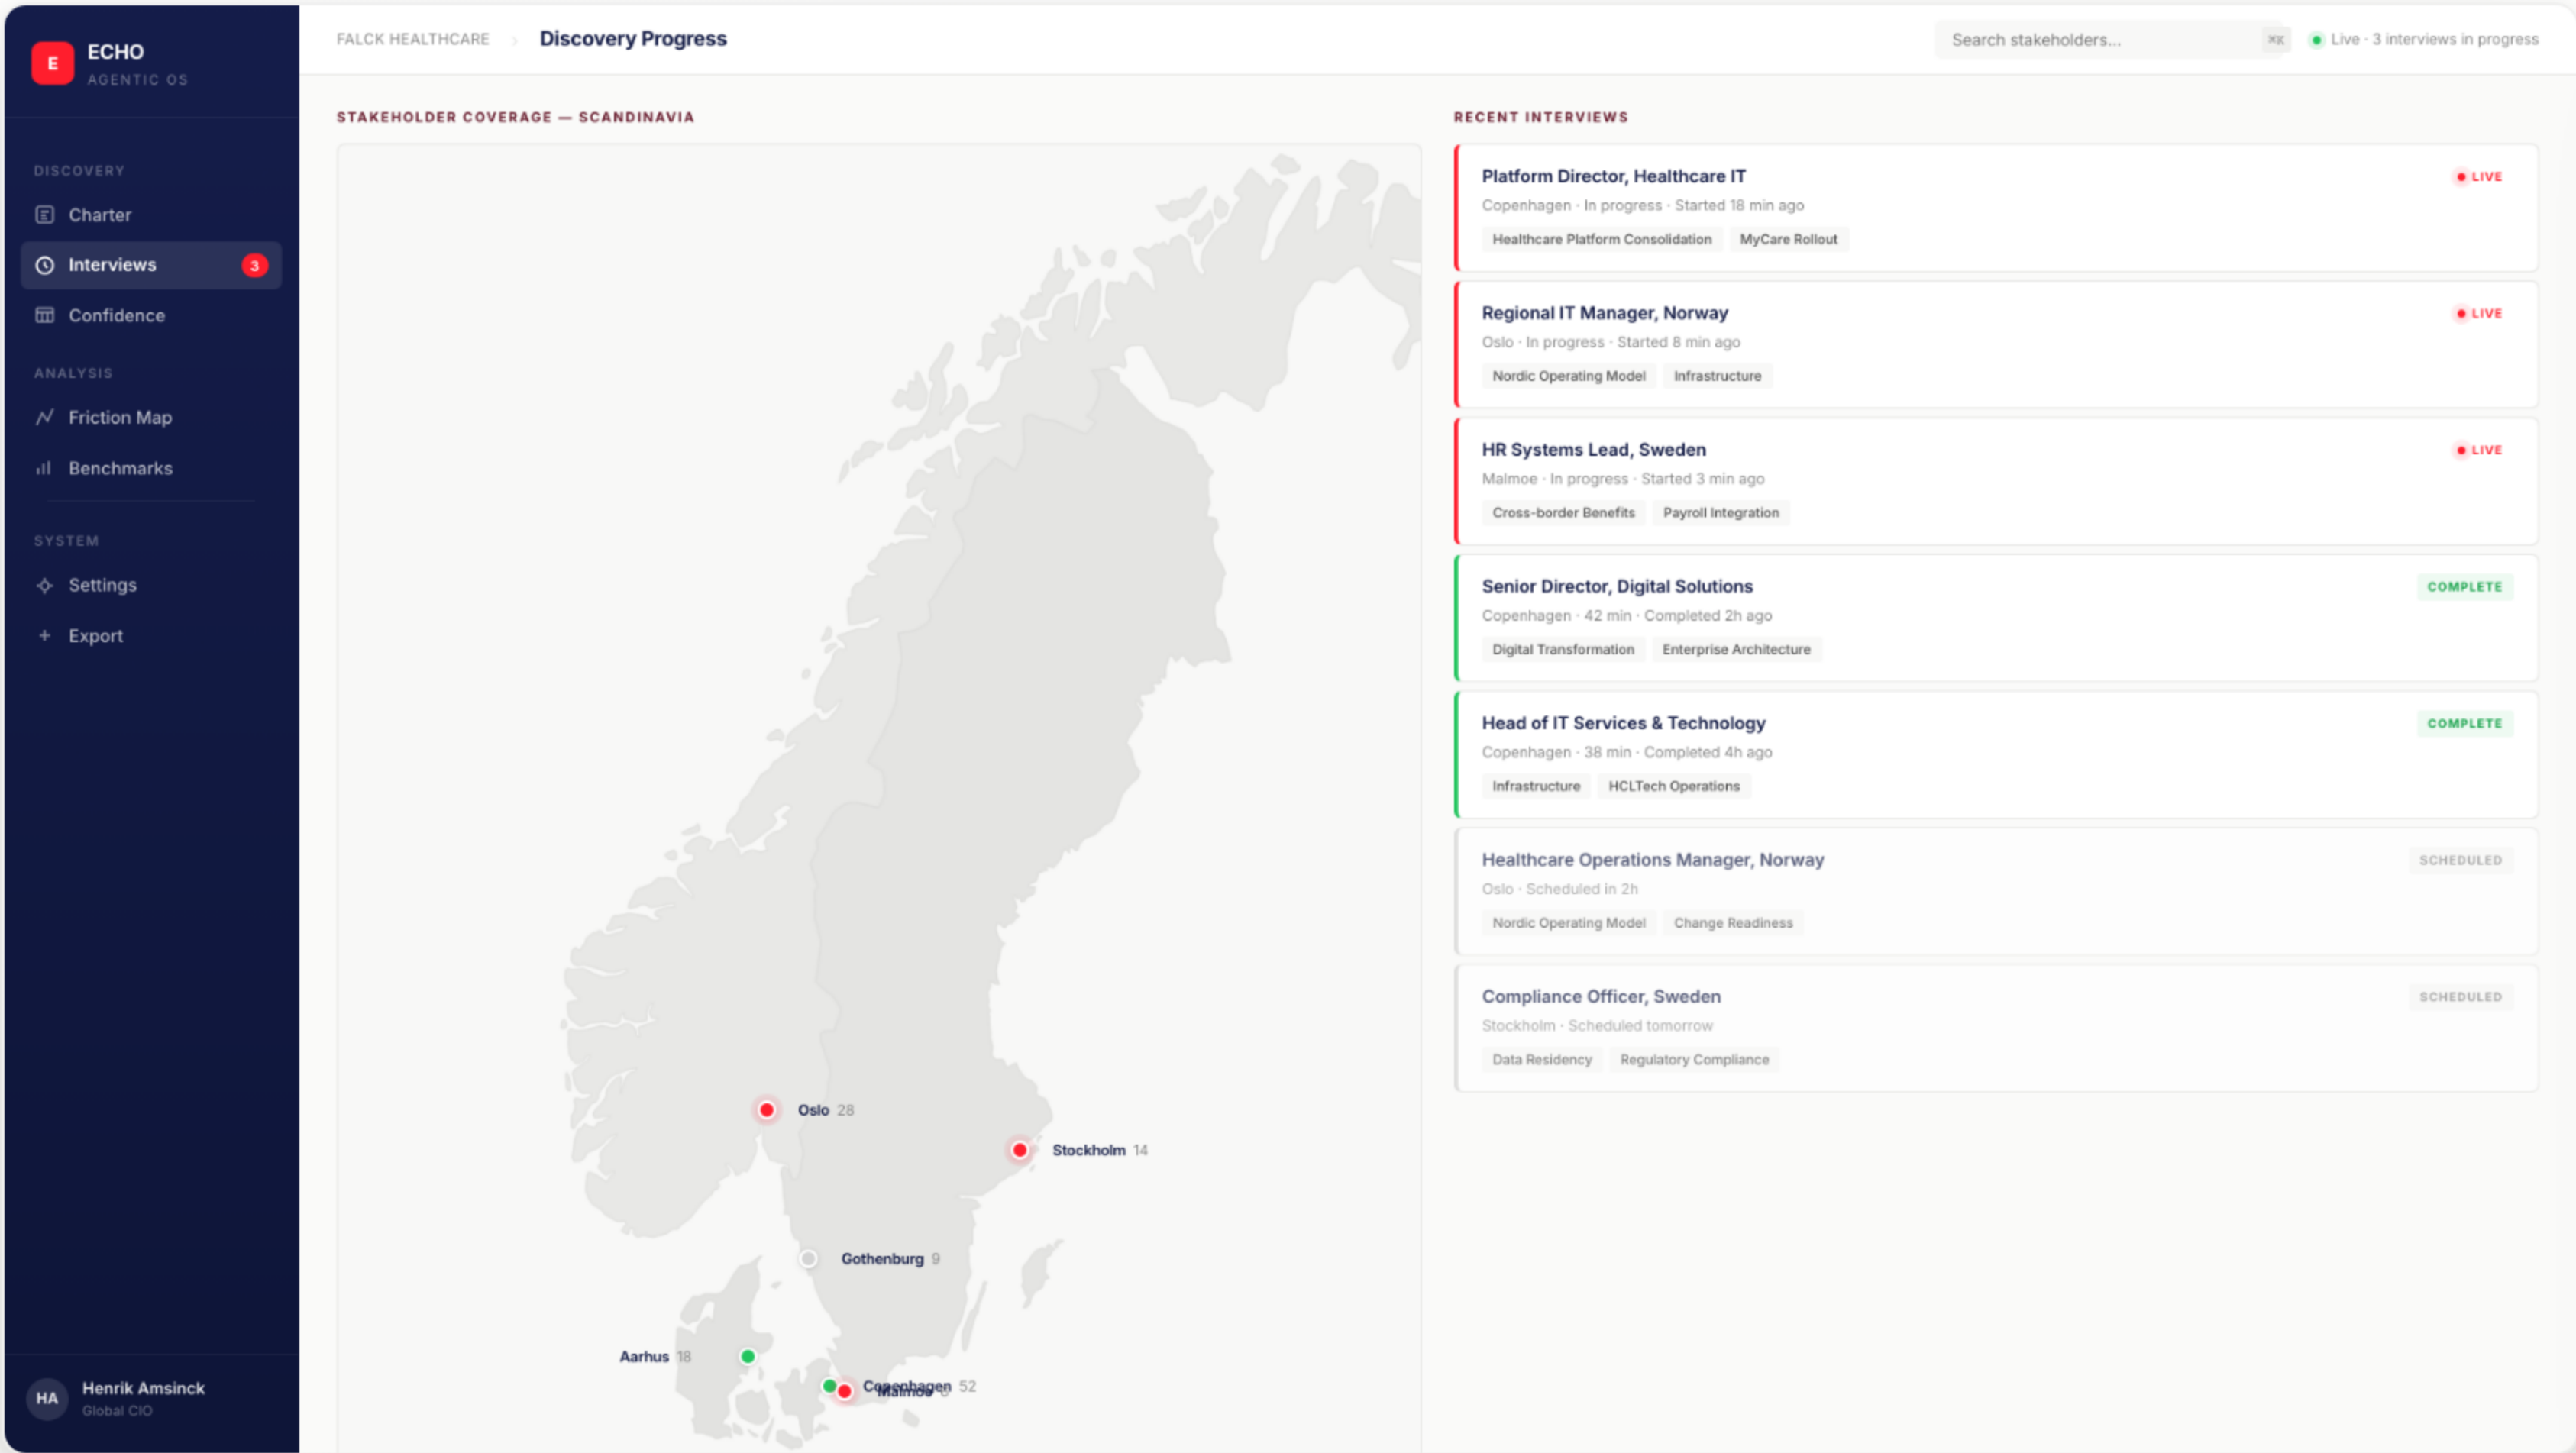

Confidence Heatmap

- **10 thematic areas scored** — technology, process, culture, compliance — quantified confidence per country
- **Dissonance detection** — reveals where leadership and frontline disagree on readiness
- **Investment signal** — shows exactly which areas need attention before a Nordic rollout

The CTO gets a board-ready discovery brief in 3 weeks — not 3 months. Every claim attributable to source interviews.

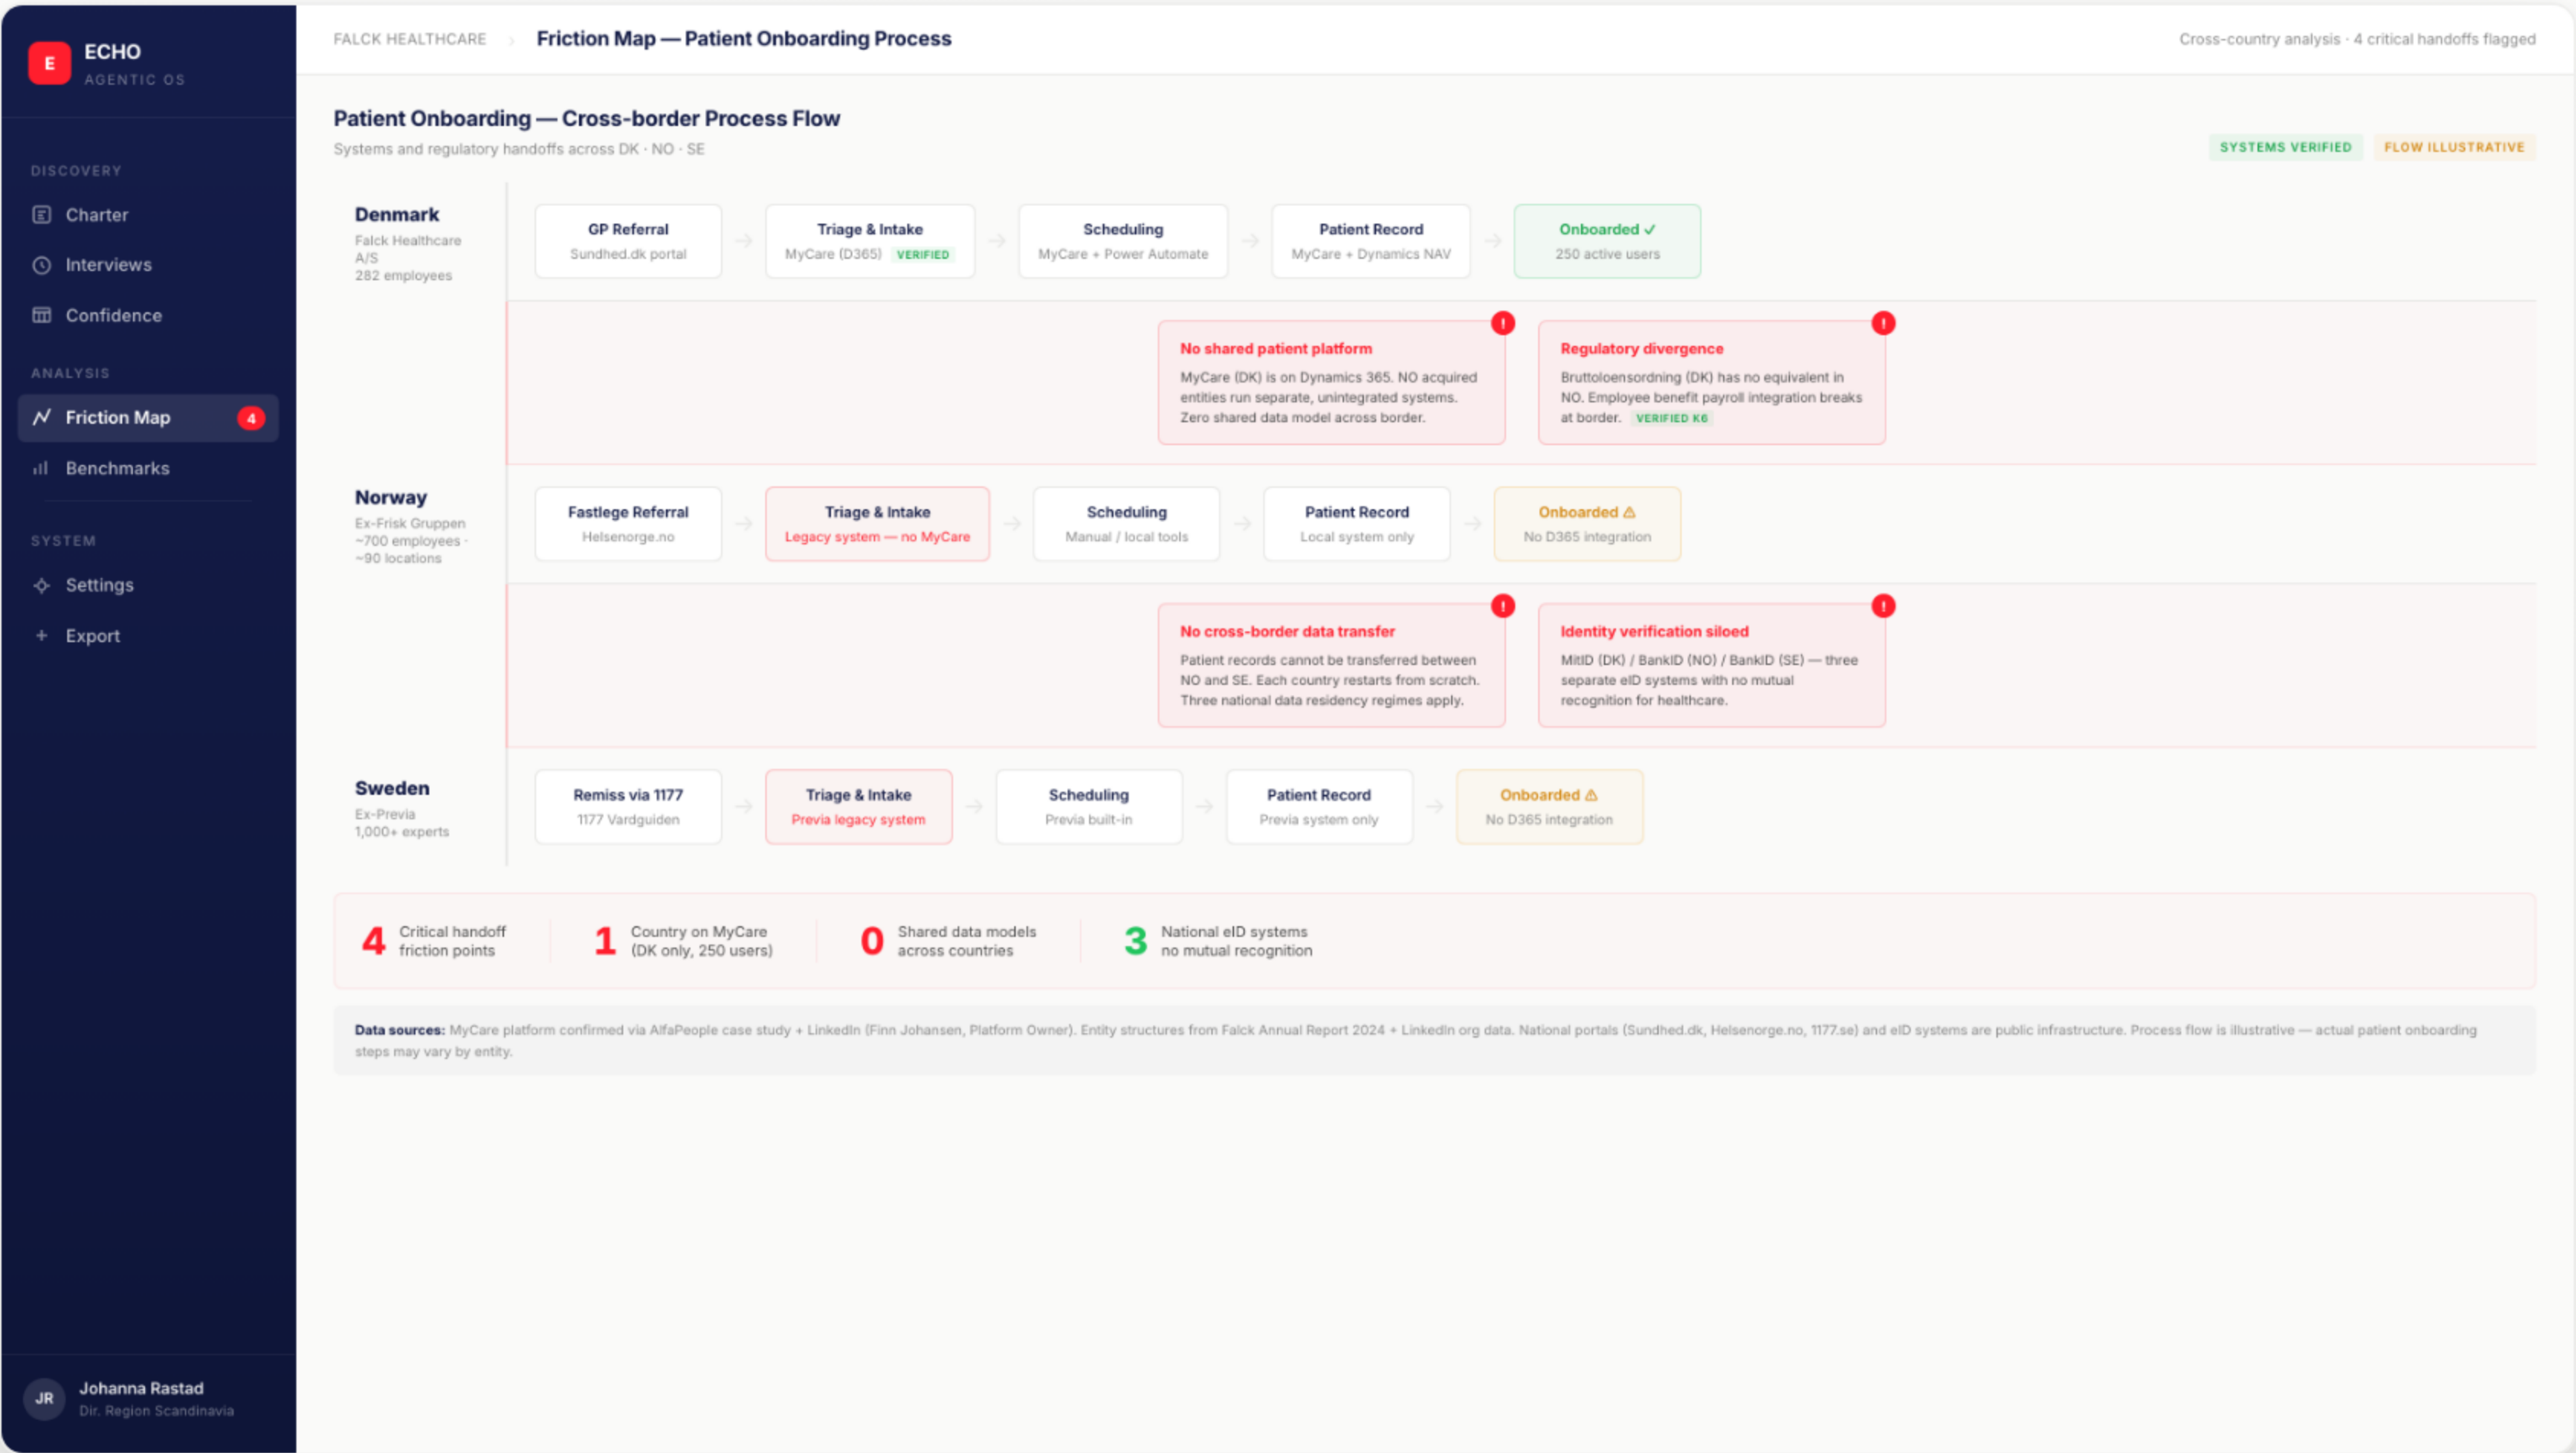

Tactical Intelligence

FOR — Directors • Program Managers • Domain Leads

Interview Dashboard

- **300 structured interviews in weeks** — track completion, themes, and sentiment as conversations run across the organization
- **Cross-border process analysis** — surface how DK, NO, SE handle the same workflow differently
- **Attributed insights** — every finding links to the conversation that produced it, with quotes

Friction Map

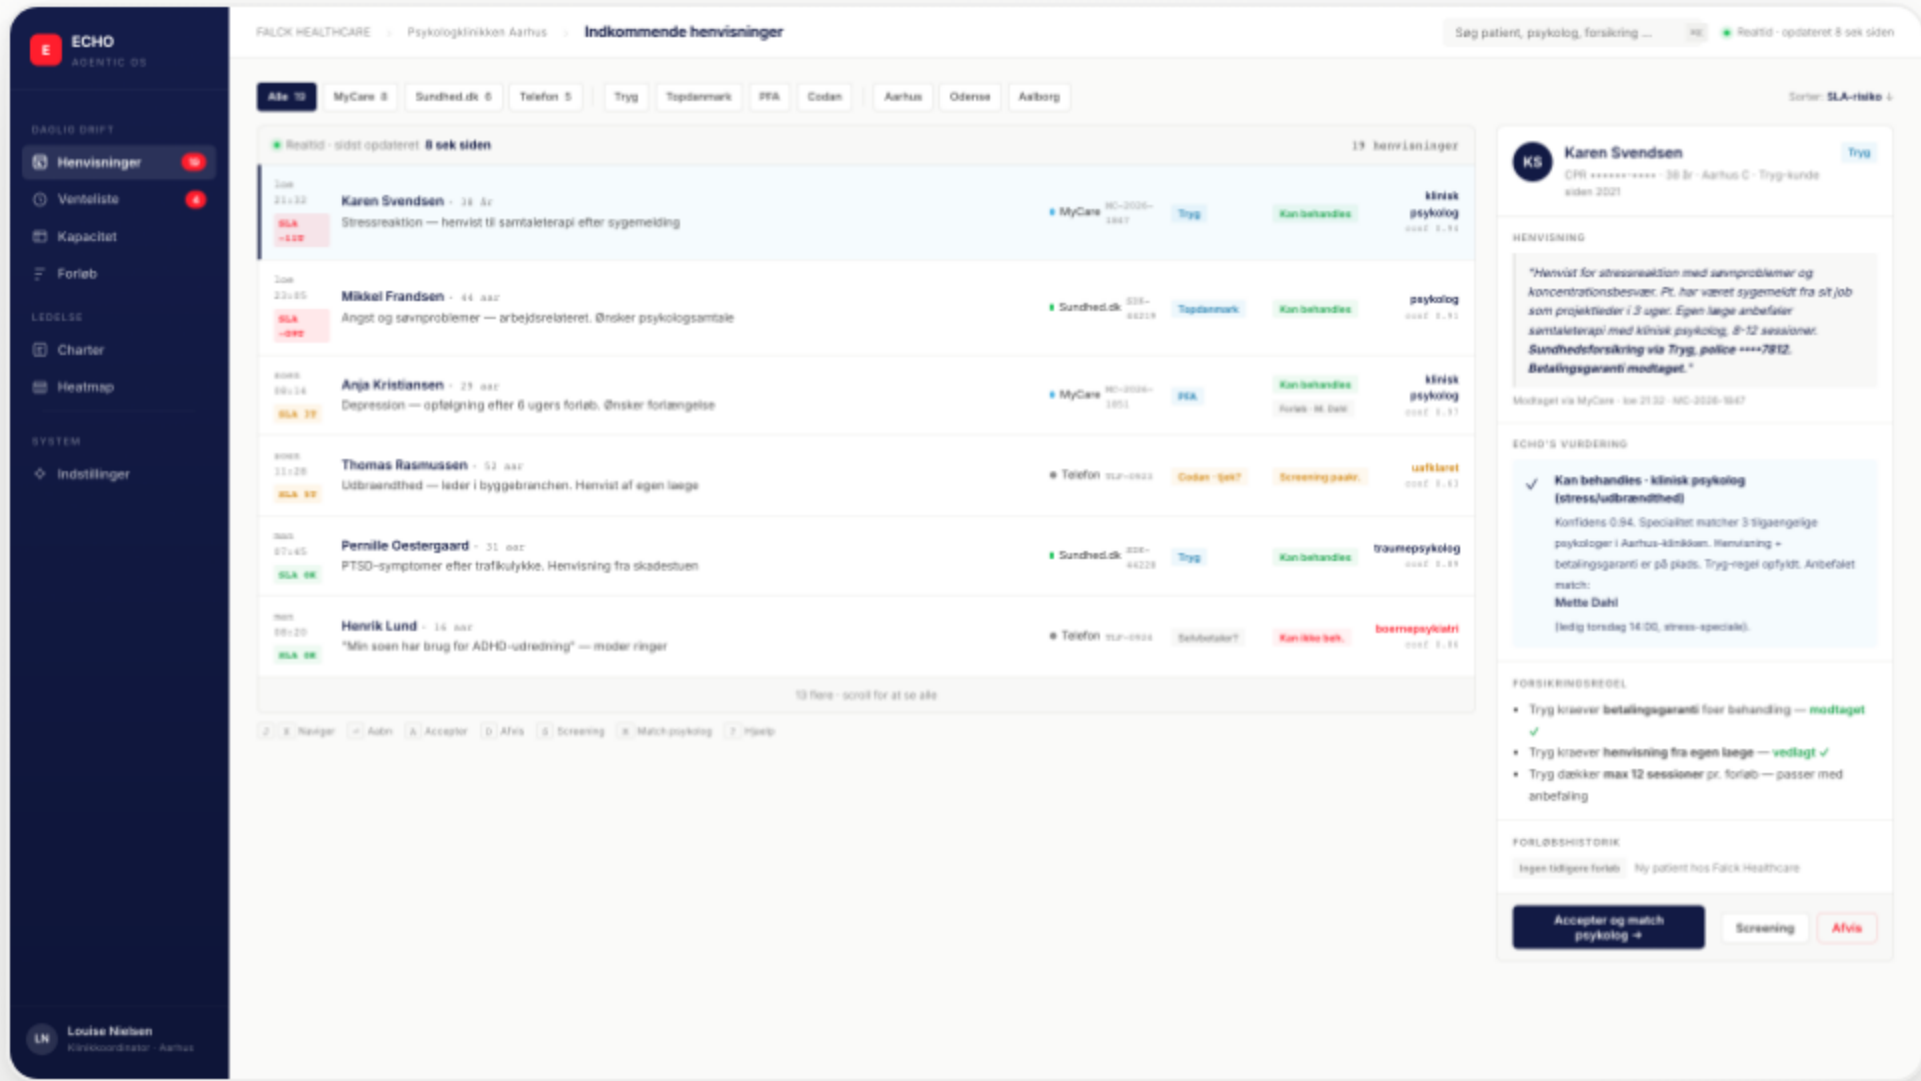

- **Organizational topology** — friction mapped to teams, processes, and handoffs — not abstract categories
- **Hidden divergence** — reveals where countries don't know they diverge — the most dangerous kind
- **Priority sequencing** — shows which harmonization efforts unblock the most downstream value

Program managers see the real friction landscape — not the one people talk about in workshops. Built from 300 individual conversations, not 12 people in a room.

Operational Workflow

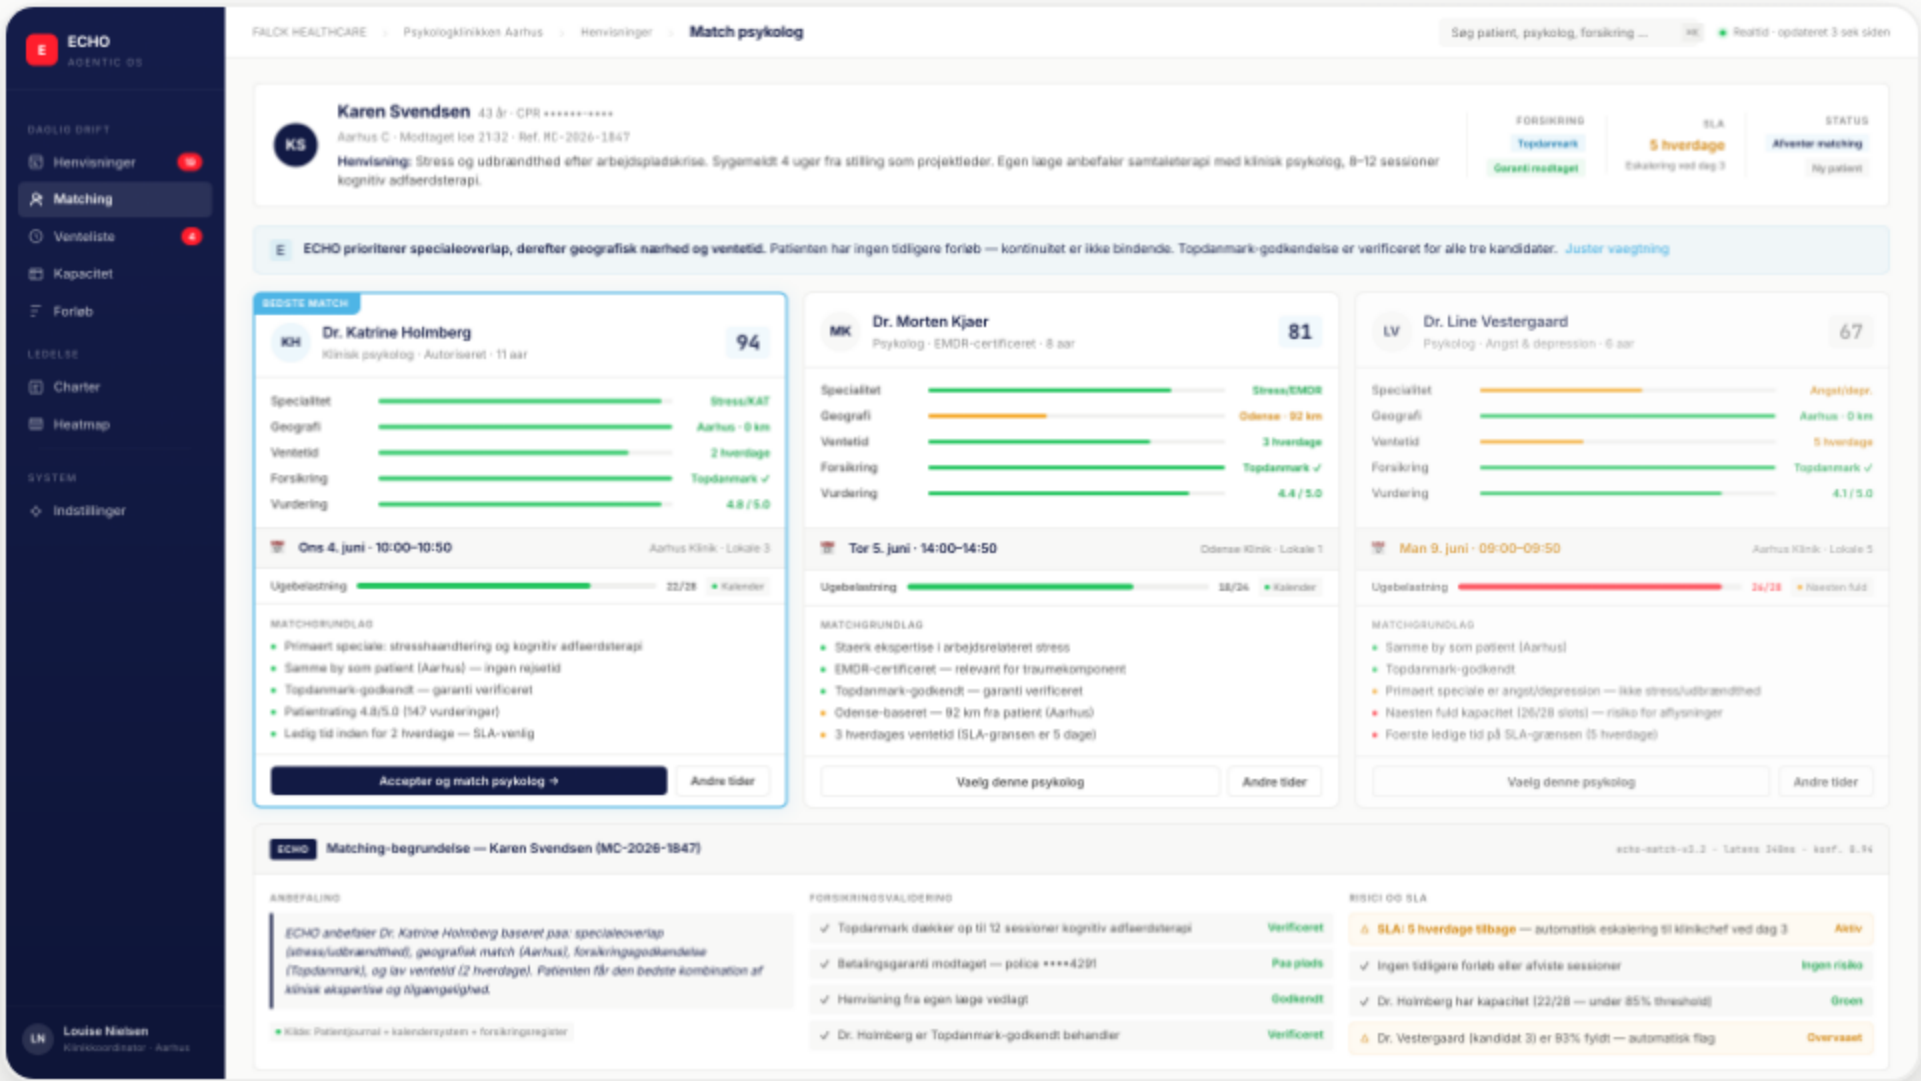

From referral to recovery — five connected workstations

01 INTAKE

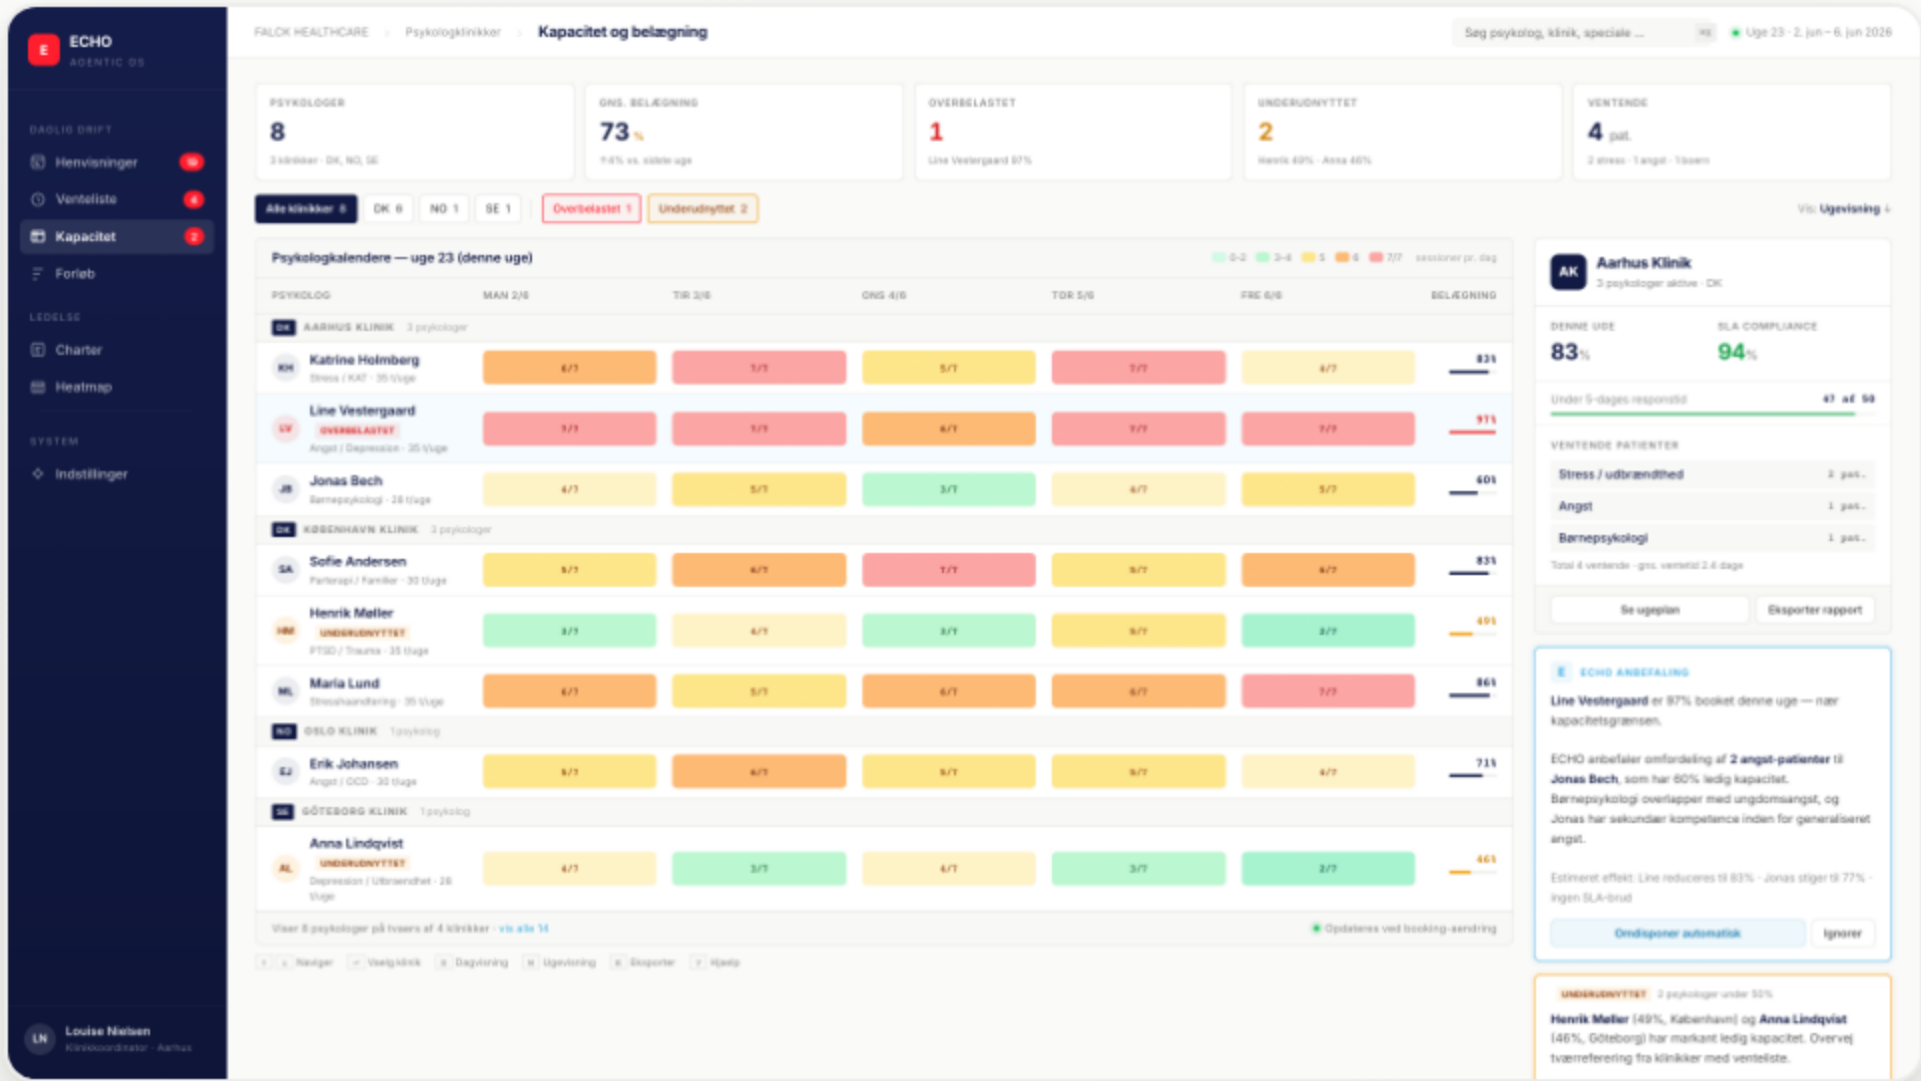

All referrals triaged, tracked, validated

02 MATCH

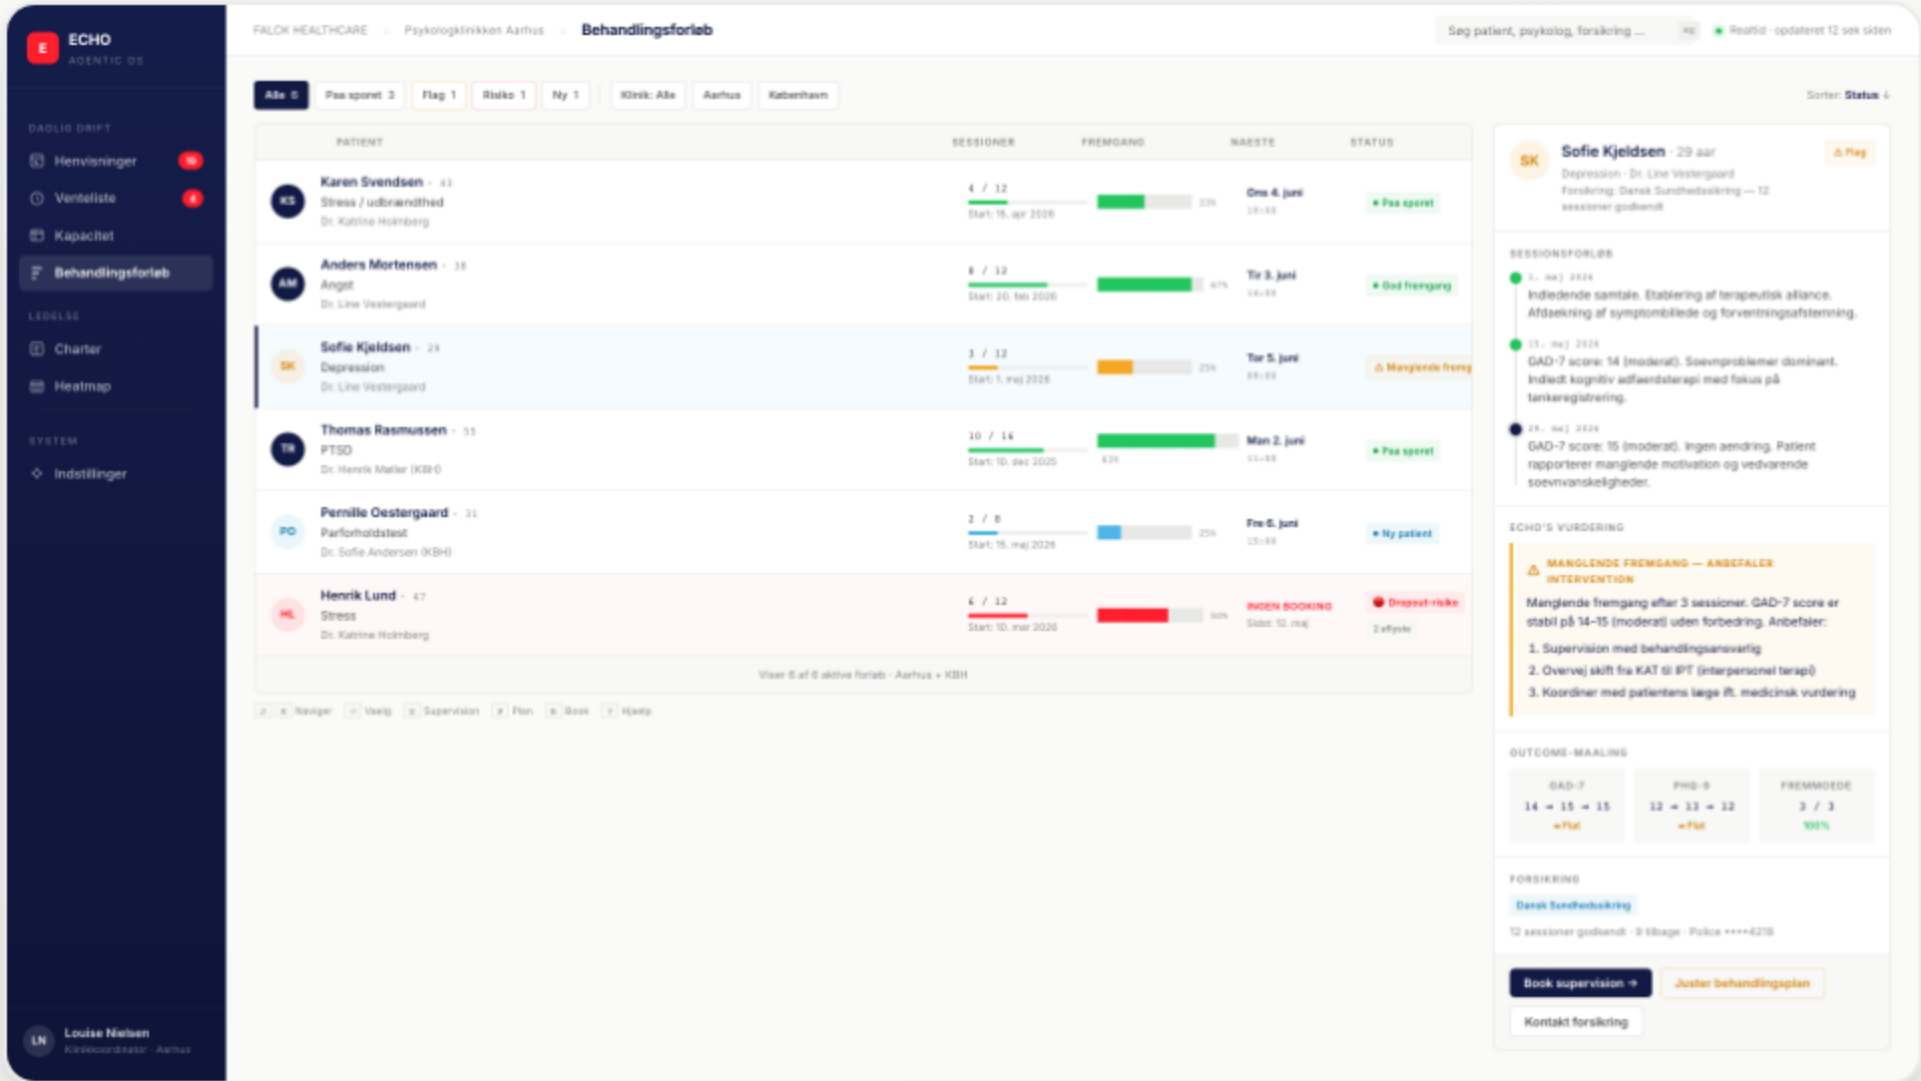

AI-weighted by specialization and proximity

03 CAPACITY

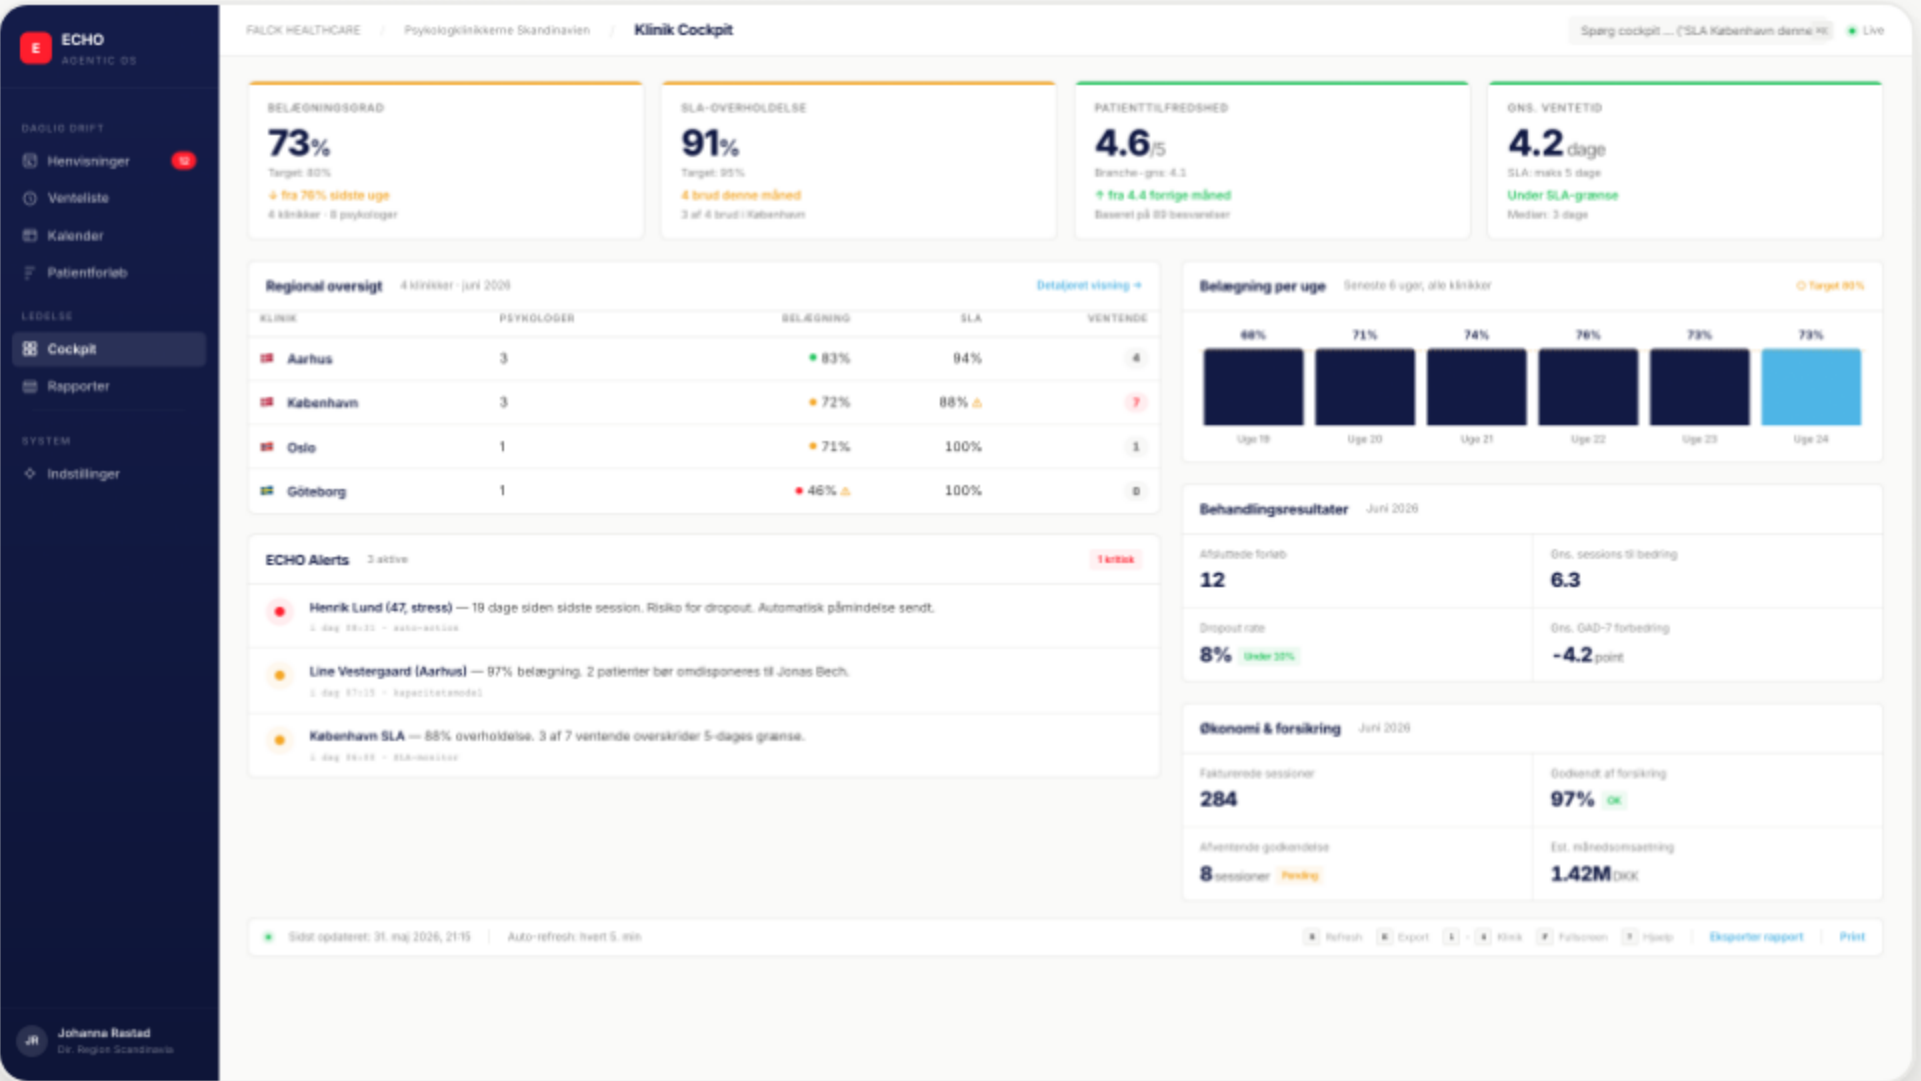

Real-time utilization across all clinics

04 TREATMENT

Sessions, outcomes, and progress tracked

05 OVERSIGHT

KPIs, financials, SLA compliance live

ECHO doesn't just analyse — it operates. One continuous patient journey, from the first referral to recovery.

TIMELINE

Discovery phase: 3 months → 3 weeks

"Man går fra at køre processer synkront... du kan snakke med tusind mennesker simultant."

Kåre Carlsen · Business Development Manager · Falck

Get ECHO.

Inspire your organization to
make your mark in 2026.

Keep winning.

Start with one scope.

A Nordic alignment. A tech landscape nobody's mapped yet. A merger integration that stalled in committee. Point ECHO at it.
