

ECHO

AGENTIC OPERATING SYSTEM

From copilot to superagent. One platform.

THE PROBLEM

Nobody validated what's underneath.

78% of enterprise strategies fail in execution

McKinsey, "Why Transformations Fail"

STRATEGY DECK

4 months

to build a strategy

127 meetings

to align stakeholders

1 deck

that nobody validated

And then you hit the wall.

THE PATTERN

The traditional approach discovers problems last.

INTRODUCING ECHO

An Agentic Operating System.

ECHO is not a tool, a consultancy, or a platform you log into. It’s an AI-native operating system that discovers what your organization actually needs — then builds and runs the solution. With your people.

01

Discover

AI agents interview hundreds of stakeholders in weeks. They map your real landscape — **not the one in the strategy deck**. Every insight is attributed, scored, and cross-validated.

02

Build

Agents author solutions based on what they discovered. **Your people decide** what gets built — product owners, architects, designers stay in control at every step.

03

Operate

The same system that discovered and built can **run alongside your teams**. It operates alongside your recruiters, HR managers, talent acquisition teams — in the frontline, with your people.

Discover → Build → Operate is a continuous loop. ECHO keeps learning from how your organization actually works.

HOW IT WORKS

Agents author. Humans decide. Repeat until done.

DISCOVER
AGENTS

AI agents interview stakeholders, map the landscape, and surface what nobody talks about in meetings.

DECIDE
YOUR PEOPLE

Your product owners, architects, and designers choose what gets built. They set the constraints. They stay in control.

EXECUTE
AGENTS

Agents build what was decided. They propose, iterate, and deliver — your people review and accept.

THE RULE **Agents never decide.** They discover, author, and execute. Humans own every decision that shapes what gets built and how it operates.

THE SHIFT

~~Synchronous. Sequential.~~
~~12 people in a room.~~

Asynchronous. Parallel.
300 stakeholders across your Nordic offices
in weeks.

ECHO runs structured interviews across your entire organization. Not surveys. Real conversations — in weeks, not quarters.

From customers to recruiters to product teams.

TIER 1

STRATEGIC

"Where is the organization, really?"

Confidence-scored discovery across 10 thematic areas. Cross-country heatmaps. Dissonance detection. Evidence-backed charter — not assumptions.

CEO · CPO · STEERING COMMITTEE

TIER 2

TACTICAL

"Where are the friction points?"

300 structured interviews in weeks. Cross-market analysis. Friction maps showing where NO, SE, DK, and FI customers and teams diverge — and where they don't know they diverge.

DIRECTORS · PRODUCT MANAGERS

TIER 3

OPERATIONAL

"How does it hit daily work?"

AI-powered candidate matching. Workflow automation. Recruiter load balancing. SLA tracking. ECHO doesn't just analyse — it operates alongside your recruiters and HR managers.

RECRUITERS · HR MANAGERS · TA LEADS

Recruitment Workflow Bottlenecks

Where do candidates drop off? Which steps take 10x too long?

AI Readiness Across Nordic Offices

Which teams are ready for superagents? Who still needs the copilot?

Integration Pain Between Legacy Systems

What breaks when Grade meets Talentech? Where do handoffs fail?

Customer Success Signal Gaps

Which 4,000 customers are at risk? What signals are you missing?

Candidate Experience Friction Points

From application to offer — where does the experience break down?

Product-Market Fit by Segment

Enterprise vs. SMB vs. public sector — one product or three?

Post-Merger Platform Alignment

Grade + Talentech: one roadmap or two backlogs fighting?

Data & Compliance Landscape

GDPR across four Nordic markets. What varies? What's missing?

Talent Acquisition Team Capacity

Can your TA teams scale with your customers' growth?

Competitive Intelligence Mapping

Where are you winning? Where are you bleeding deals?

From Copilot to Superagent

FOR — CEO • CPO • Steering Committee

Customer Insight Discovery

- **What customers actually need** — not what surveys say. Real conversations with recruiters, HR managers, and TA leads across four Nordic markets
- **Copilot gap analysis** — where the AI Copilot helps, where it falls short, and what the superagent layer needs to cover
- **Segment-level clarity** — enterprise vs. SMB vs. public sector needs mapped with confidence scores

AI Readiness Heatmap

- **10 thematic areas scored** — technology, process, culture, compliance — quantified confidence per Nordic market
- **Dissonance detection** — reveals where leadership and frontline recruiters disagree on AI readiness
- **Investment signal** — shows exactly which capabilities need building before the superagent rollout

The CPO gets a board-ready discovery brief in 3 weeks — not 3 months. Every claim attributable to source conversations across 4,000 customers.

Recruitment Workflow Automation at Scale

FOR — Directors • Product Managers • TA Leads

Structured Interview Dashboard

- **300 structured interviews in weeks** — track completion, themes, and sentiment as conversations run across your customer base and internal teams
- **Cross-market workflow analysis** — surface how NO, SE, DK, and FI handle recruitment differently
- **Attributed insights** — every finding links to the conversation that produced it, with quotes

Recruitment Friction Map

- **Workflow topology** — friction mapped to teams, processes, and handoffs — from job posting to offer acceptance
- **Talent pool optimization** — reveals where candidate pipelines leak and which stages need automation first
- **Priority sequencing** — shows which automation efforts unblock the most downstream value for your 1.2M users

Product managers see the real friction landscape — not the one people talk about in workshops. Built from 300 individual conversations, not 12 people in a room.

Platform Intelligence That Learns

From job posting to perfect hire — five connected workstations

ECHO doesn't just analyse — it operates. One continuous hiring journey, from job posting to perfect hire.

TIMELINE

Traditional

12 months

With ECHO

6 months

Discovery phase: 3 months → 3 weeks

"You go from running processes synchronously... to talking to a thousand people simultaneously."

Get ECHO.

Inspire your organization to
make your mark in 2026.

Keep winning.

Start with one scope.

A post-merger integration. An AI readiness assessment
nobody's done yet. A superagent strategy that stalled in
committee. Point ECHO at it.

AGENTS AUTHOR — HUMANS DECIDE
